

ENVIRONMENTAL POLICY

Palazzo Macchine corporation is fully aware that a responsible economic strategy, oriented to the environmental problems deriving from its own activities, is essential for the success of the company and for that of its customers.

Moreover, **PM corporation** acknowledges that the constant improvement of its environmental performances leads to significant commercial and economic advantages. At the same time, the company satisfies the expectations of the environmental improvement related to the local context in which it operates.

PM corporation tends to pursue a policy of constant improvement of its environmental performances, minimizing, where technically possible and economically sustainable, each negative environmental impact of its activities.

PM corporation intends to pursue the goals indicated above through the following actions:

- ensuring that company's activities are accomplished according to the current law's instructions and to possible subscribed code documentations;
- authenticating, realizing and keeping an efficient Environmental Management System active, in accordance with the requirement of the law;
- realizing any kind of effort: organisational, technological and operational to prevent water, air and ground pollution;
- minimizing the consumption of energy and water, and the production of litter. PM subserves the pickup where possible;
- defining the purposes and the environmental goals, that have to be integrated with the operative management and the company's development programs;
- ensuring oneself that the environmental policy exposed here and the related management system are understood, activated and kept at each level of the organisation. Moreover, the system must be sustained by recurrent and systemic imprinting, coaching, verifying and re-examining activities;
- ensuring oneself that this document is available for the public and for all the parties interested.
